

WHAT IS CLAIMED IS:

1. A bottle opener for removing a bottle cap from a bottle and having a triangular shape and adapted for mounting to the underside of a horizontal surface, the opener having a base, first and second leg portions extending substantially perpendicular to said base and having first and second ends, a third leg extending between said first ends of said first and second leg portions and a horizontal edge portion extending from said vertical portion, the distance between the inner surface of said horizontal portion and said base being greater than the height of said bottle cap.
2. The bottle opener of claim 1 wherein said base has at least one hole formed therein.
3. The bottle opener of claim 2 wherein a fastener is inserted into one of said holes to secure said opener to said surface.
4. The bottle opener of claim 1 wherein said horizontal edge portion extends the entire length of said third leg.
